EDUCATION

Universitas Dipa Makassar, Makassar, South Sulawesi, Indonesia — 2015 - 2019
B.Sc. Information Technology, GPA: 3,59

PROFESSIONAL EXPERIENCE

Pentagon, Inc. — 2026 - now
Flutter Developer
Project Into-You :

- Developed a mobile application with Flutter and Dart that lets users import WhatsApp chats and explore relationship insights through guided onboarding and dedicated results screens.
- Built WhatsApp chat import and parsing features for `.txt` and `.zip` exports, handling variations in message and date formats.
- Created communication analysis features covering message balance, conversation initiation, activity over time, frequently used words and emojis, and relationship patterns.
- Integrated AI-powered insights and recommendations using Firebase AI and Gemini, with Firebase Remote Config for model configuration.
- Integrated Firebase services including Authentication, Firestore, Storage, Analytics, Crashlytics, Remote Config, Cloud Functions, and App Check.
- Implemented account and subscription flows, including Google and Apple sign-in, account management, and in-app purchases through RevenueCat.
- Built app state management and navigation using Riverpod, Hooks Riverpod, and GoRouter.
- Developed supporting features such as local notifications, notification history with Sembast, user feedback, account deletion, and usage analytics.
- Worked with privacy-focused data handling: the project documents a policy of processing raw chat data in memory and saving structured analysis results instead.
- Added automated tests for services and view models, including WhatsApp parsing, subscriptions, authentication, local storage, and analysis results.

Skills & Tech:

Flutter · Dart · Firebase · Riverpod · GoRouter · Gemini · RevenueCat · Cloud Firestore · Firebase Authentication · Firebase Analytics · Crashlytics · Sembast · API Integration · File Processing · Mobile App Testing · iOS Development

Project Kiory:

- Developed a cross-platform mobile learning app with Flutter and Dart. Implemented screens and reusable UI components for organizing folders, decks, and flashcards, as well as creating and editing study materials.
- Implemented adaptive spaced repetition. Built review

scheduling that adjusts card intervals based on learners' Hard, Medium, or Easy ratings, with logic for new cards, repeat reviews, and review summaries.
- Integrated AI-powered study content generation. Connected Firebase AI to generate flashcards from text prompts and uploaded images, with support for configurable card formats and usage limits.
- Built a Firebase-backed data and authentication layer. Worked with Firebase Authentication, Cloud Firestore, and Firebase Storage to support user accounts and cloud-based study content.
- Implemented local persistence and application state management. Used Riverpod for app state and Sembast and Shared Preferences for local data and user settings.
- Integrated subscriptions and usage quotas. Connected RevenueCat for premium entitlements, purchases, and restores, and implemented plan-based limits for decks, cards, and AI generation.
- Added study reminders and mobile platform integrations. Implemented review notifications, text-to-speech, camera and image input, and related app settings.
- Supported internationalization. Added localized app content in English, Indonesian, and Japanese using Flutter's localization tools.
- Instrumented product events and app diagnostics. Integrated Firebase Analytics and Crashlytics to support usage measurement and crash reporting.
- Structured the app with maintainable routing and feature layers. Organized code into models, repositories, services, viewmodels, views, and shared widgets, with typed navigation using GoRouter.

Skills & Tech:

Flutter, Dart, Riverpod, Firebase, Cloud Firestore, Firebase AI, RevenueCat, REST/service integration, mobile app architecture, state management, internationalization, subscription integration, and spaced repetition systems.

Project LittleWins:

- Developed a cross-platform mobile app with Flutter and Dart — Built Little Wins, an app where parents manage children's homework and routines through an interactive virtual-monster experience.
- Implemented parent and child account flows — Built sign-up, login, password reset, and profile management features using Firebase Authentication and Google Sign-In.
- Built cloud-backed data features — Used Cloud Firestore to store and sync parent and child profiles, homework schedules, and completion records.
- Created gamified homework and reward experiences — Developed daily quests, streak tracking, a reward shop, collectible monsters, food, accessories, and decorations to encourage consistent engagement.
- Implemented interactive monster customization — Built a camera-style view for dressing up monsters, taking and saving screenshots, and guiding users through the experience with an in-app tutorial.

- Integrated subscriptions and purchase restoration — Connected RevenueCat to retrieve subscription offerings, process purchases, restore access, and associate purchases with user accounts.
- Added notifications and engagement features — Implemented scheduled local reminders for hungry monsters, Firebase Cloud Messaging support, analytics, and crash reporting.
- Delivered multilingual support — Added localized app content for English, Indonesian, Japanese, and Chinese using Flutter's localization tooling.
- Built reusable app architecture and navigation — Organized features with Riverpod state management, view models, repositories, and typed GoRouter navigation.
- Supported release readiness and app reliability — Added remote-config-based force-update handling, onboarding flows, feedback and FAQ screens, and refined app behavior through iterative fixes.

Skills & Tech:

Flutter, Dart, Riverpod, Firebase Authentication, Cloud Firestore, Firebase Analytics, Crashlytics, Cloud Messaging, RevenueCat, GoRouter, Flutter localization.

Freelance 2019 - now
Software Developer

- Created public service websites based on form fill and document upload using Laravel and React.js with Typescript.
- Created company profile websites for government institutions using Laravel and React.js with Typescript.
- Created a website with Flutter Web.
- Created market place mobile applications using Flutter, Firebases etc.
- Used state management in Flutter : Riverpod, Flutter hooks.
- Used github and gitlab as a versioning tool.
- Used Docker for website building.
- Built iOS application with github actions.

PT Grocee Teknologi Indonesia, Makassar, South Sulawesi, Indonesia Sept, 2020 - Dec, 2023
Flutter Developer

- Integrated REST Api server from backend using Flutter.
- Integrated gRPC communication protocol from backend using Flutter.
- Used state management in Flutter : Provider, GetX.
- Created market place mobile applications using Flutter, Firebases etc.
- Created a Driver Mobile application based on location tracking using Flutter, Firebases etc.
- Created a Social media application using Flutter, Firebases etc.
- Led a mobile developer team to build the market place applications.
- Mentored a junior developer.
- Fixed bugs and improved code.

PT Abhati Meraki Teknologi, Makassar, South Sulawesi, Indonesia Apr, 2020 - Aug, 2020
Flutter Developer

- Integrated REST Api server from backend using Flutter.
- Used state management in Flutter : Provider.
- Created e-commerce mobile applications using Flutter, Firebases etc.
- Fixed bugs and improved code.

COURSES

Udemy, Flutter 3 with Flutter Projects on Dart Programming Language 2023
Skill Academy by Ruang Guru, UX Designer: Digital Product Development 2022

SKILLS AND INTERESTS

TECHNICAL : Flutter, Laravel, React.js, Typescript, MySQL, Git, Firebase
LANGUAGE : Indonesia, English
INTERESTS : Football, Reading, Eating
